Specifications

Quality is our strength!

Our range of buildings are designed to comply with all the relevant codes as set down by Council and Statutory Authorities.

Our MultiBuild[®] Computer Software Package generates plans and specifications and pricing to suit the above codes.

The MultiBuild[®] specification sheet shows all relevant information for your particular building including the size and gauge of all the structural steel being used and the purlin and girt spacings for your particular building.

The MultiBuild[®] generated Bill of Material with each building ensures the correct quantity of materials are supplied for each job.

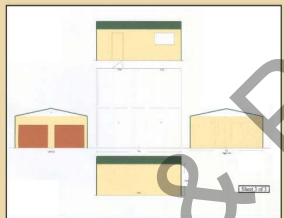

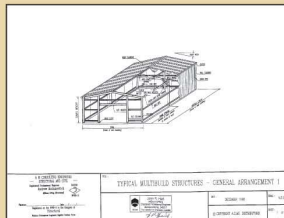

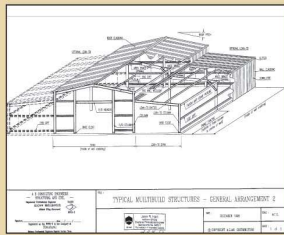

MultiBuild[®] generated elevation drawings and specifications are available with each building for you to submit for building approval.

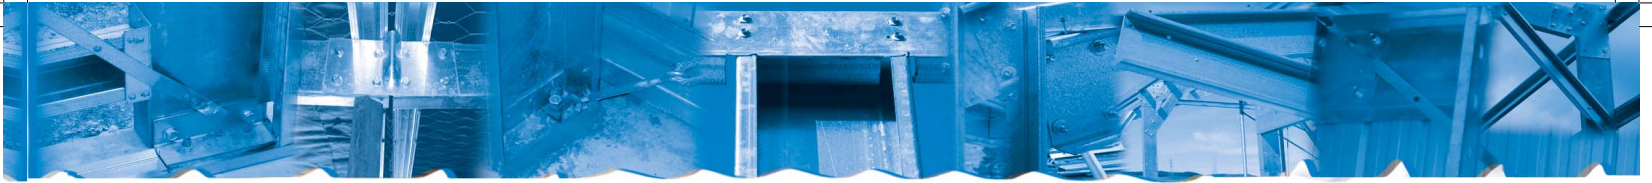

A large range of standard colours are available so that you can personalise to suit yourself. Choose different colour walls, roof, doors and trim at no extra charge. (see our attached colour brochure for the latest range of designer colours)

Most of our range of quality steel buildings feature Galvanised Portal Frame System for durability, strength and simplicity in construction.

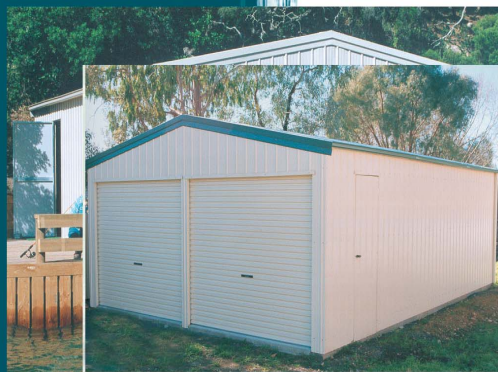

Please note that due to continual development and improvement of our range of products, specifications, colour availability, dimensions and any other information contained in this brochure is subject to change without notice. Please check current details of products, colours, sizes and procedures with the company prior to ordering.

MultiBuild[®] Software Application to facilitate all aspects of the business in conjunction with engineers specifications.

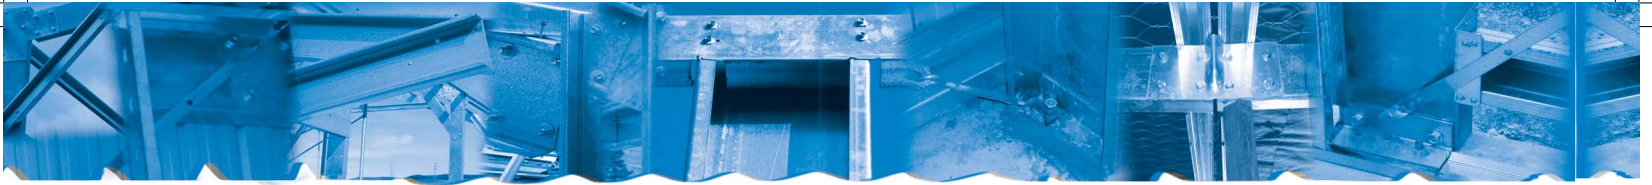

For all types of
**Quality Steel
Buildings**

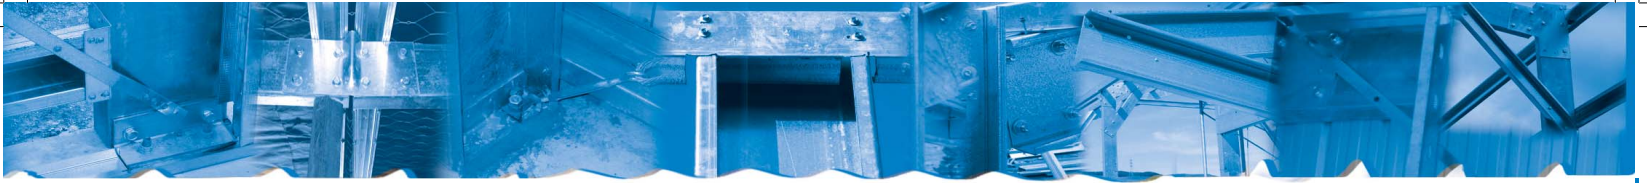

Including • Garages • Barns • Industrial Buildings • Carports

• Rural Sheds • Garden Sheds • Skillions
