Bringing light to life has been our passion for 80 years.

So, why skylights?

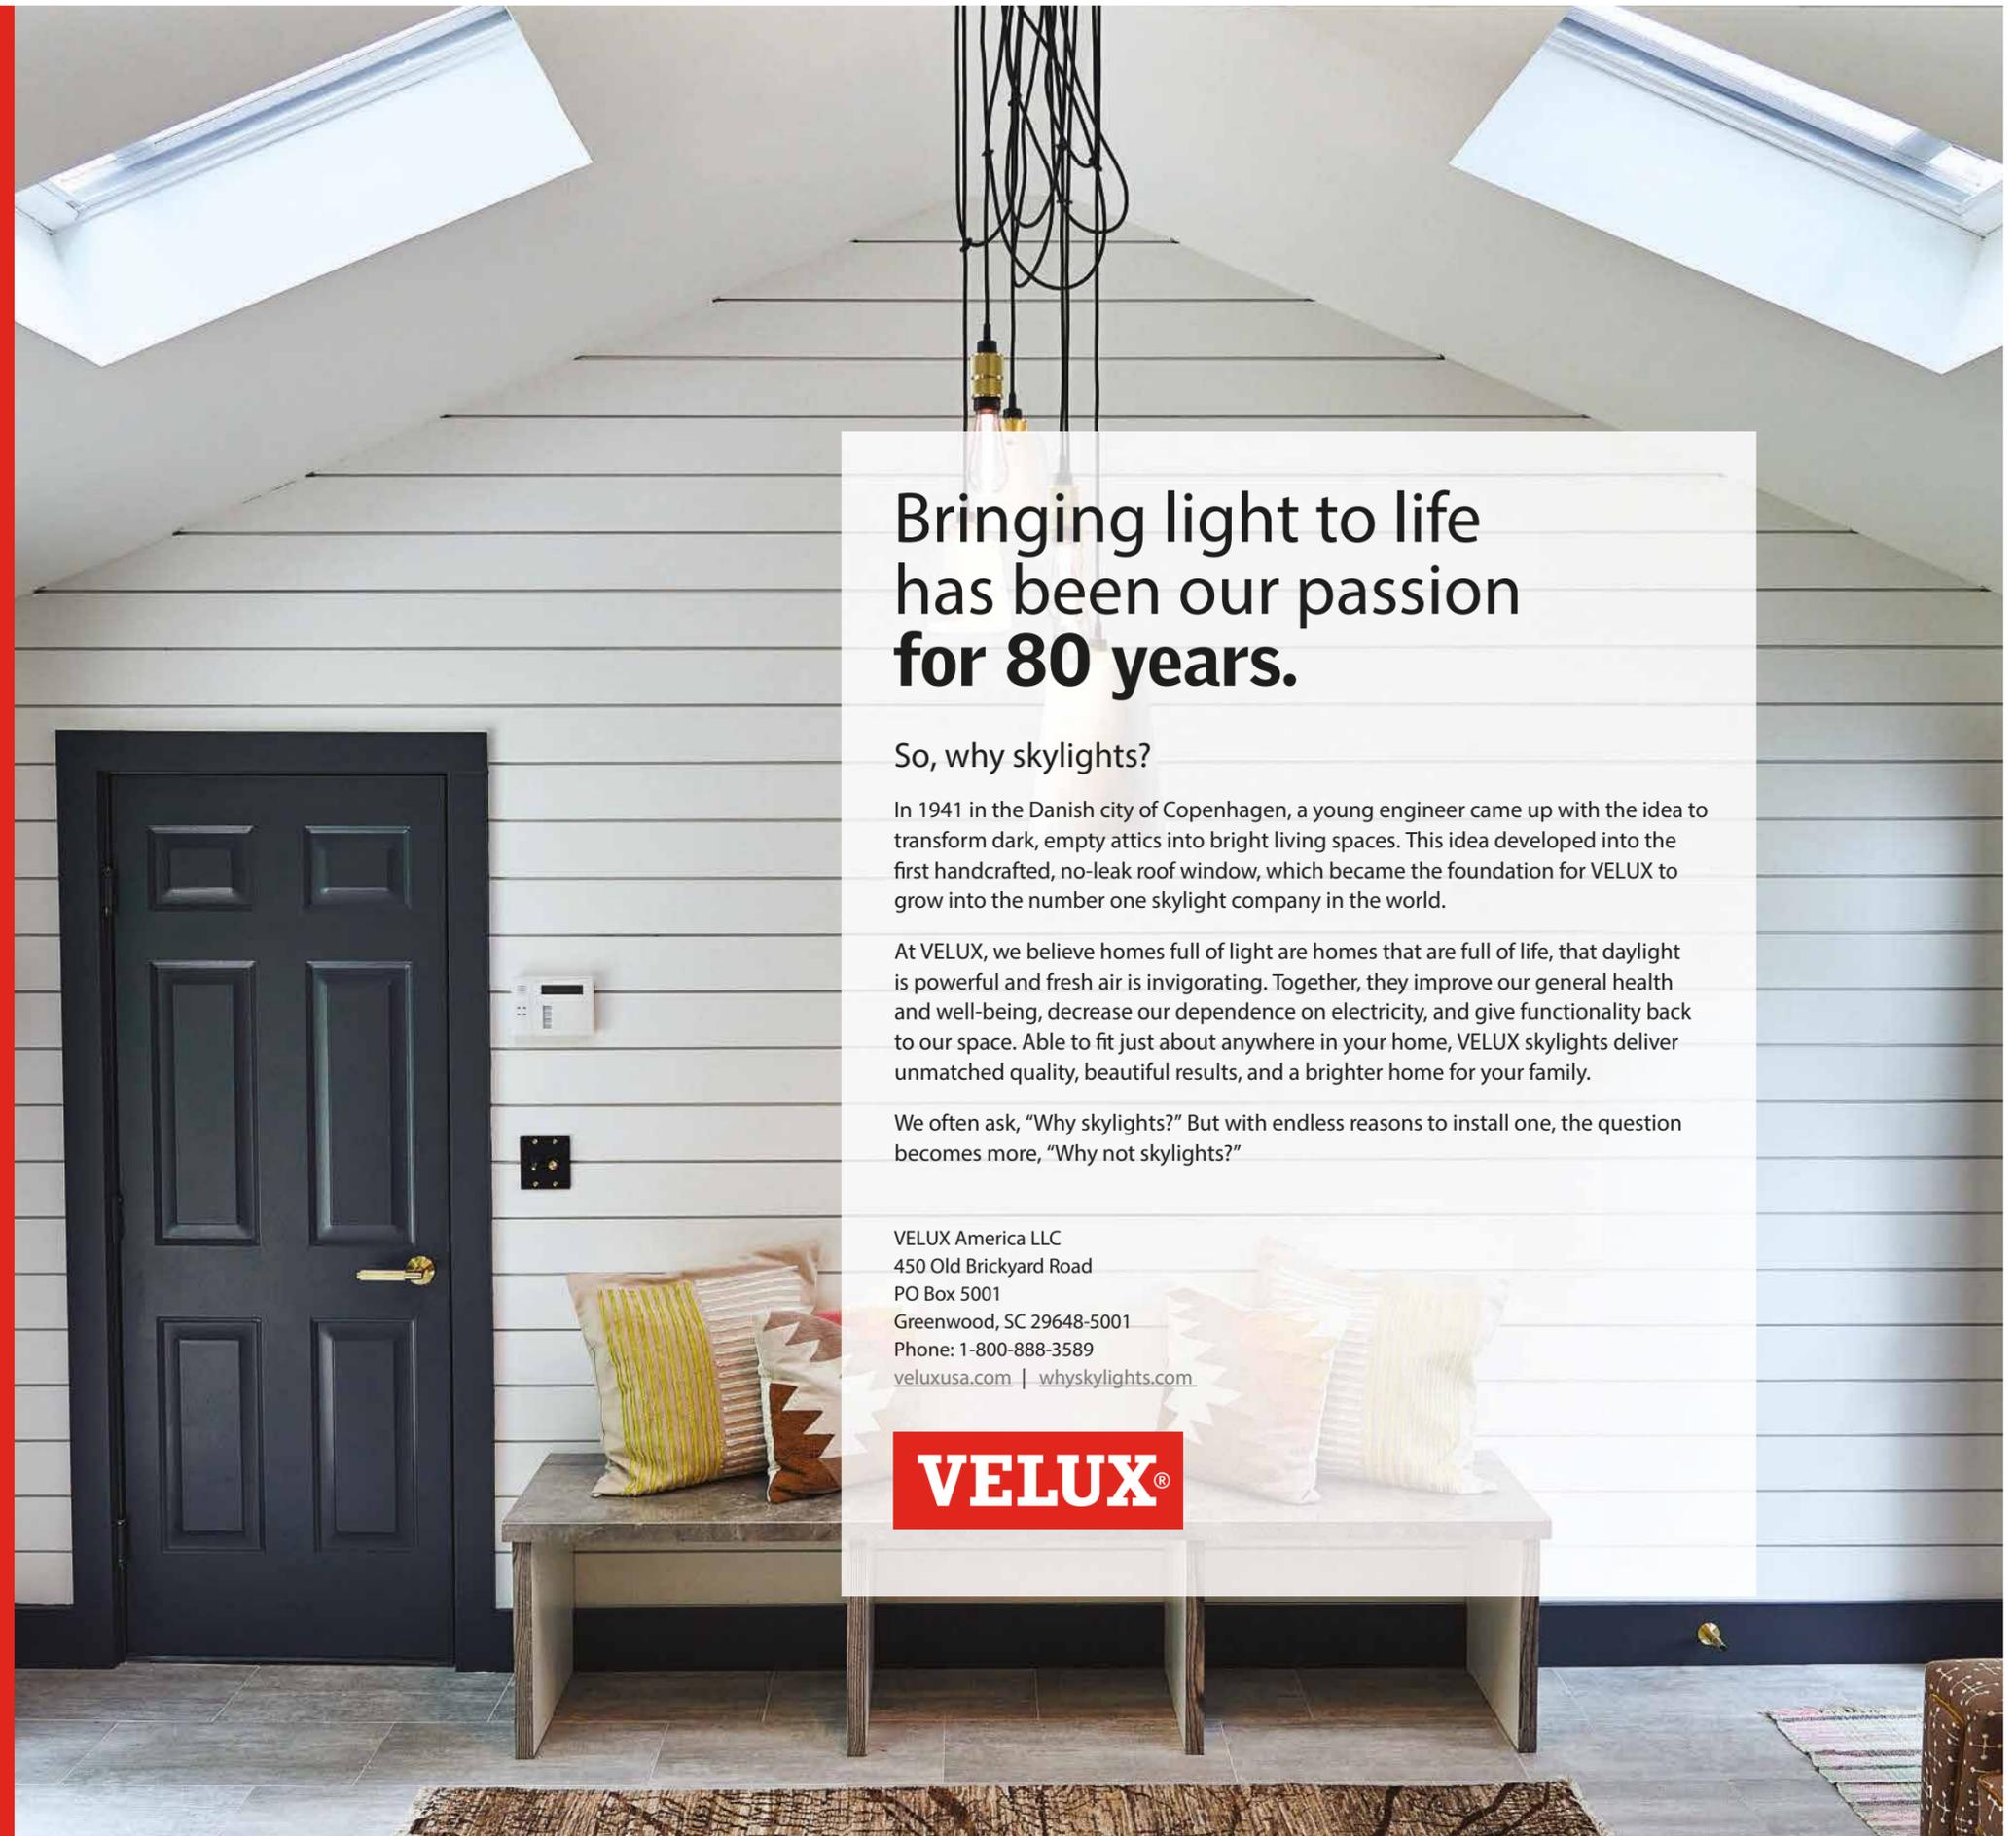

In 1941 in the Danish city of Copenhagen, a young engineer came up with the idea to transform dark, empty attics into bright living spaces. This idea developed into the first handcrafted, no-leak roof window, which became the foundation for VELUX to grow into the number one skylight company in the world.

At VELUX, we believe homes full of light are homes that are full of life, that daylight is powerful and fresh air is invigorating. Together, they improve our general health and well-being, decrease our dependence on electricity, and give functionality back to our space. Able to fit just about anywhere in your home, VELUX skylights deliver unmatched quality, beautiful results, and a brighter home for your family.

We often ask, "Why skylights?" But with endless reasons to install one, the question becomes more, "Why not skylights?"

“ We are committed to become Lifetime Carbon Neutral by 2041 by capturing 100 years of CO₂ emissions and reducing our future carbon footprint!”

David Briggs
CEO of the Velux Group

Our Goal LIFETIME CARBON NEUTRAL by 2041

Together with WWF International (World Wide Fund for Nature), we are capturing our historical CO₂ emissions through forest conservation. We will also reduce our future carbon emissions from our entire value chain in line with the Paris Agreement's 1.5°C reduction target.

See how we are getting there.

Kitchens | Cooking In Daylight

A kitchen that's full of light and fresh air is a happy, healthy kitchen. When we start to look at kitchen upgrades, we tend to look around instead of up. Enhance your cooking area with natural light through skylights. It's one of the best ways to get the most out of the sights, smells, and even tastes created in your kitchen.

Bathrooms | Time To Freshen Up

The days of function-only bathrooms are behind us. It's time to create the luxurious, spa-like room you deserve. With a skylight, you can bring in daylight from above without sacrificing privacy. See yourself in the best light and transform your bathroom into your own personal oasis - it's as simple as looking up!

Bedrooms | Sleep Under The Stars

Your bedroom is a place to recharge your body and mind, and skylights can help you make the most of it. Regular exposure to sunlight regulates your circadian rhythm, which helps you sleep sounder and wake up feeling refreshed. When you open your bedroom up to the sky, you welcome in clear, natural light and a starry expanse at night for better sleep and more productive days.

Bonus Rooms

Bonus Daylight

Bonus rooms are notorious for being the dim, catch-all rooms, so fill yours with daylight! The best way to redesign your space into a multi-functional room the whole family will enjoy is with rich, natural light. Skylights and roof windows can offer you more design possibilities than traditional windows to beautifully transform your bonus room.

Flex Rooms | Benefits Of Light

Your flex room can be anything you need it to be: a home office, a guest room, a gym, or even a home learning space. And no matter how you set up your space, skylights can transform the look of it dramatically with natural light. With benefits ranging from increased focus and alertness during the day to better sleep at night, natural light is just the thing to boost the design and function of your flex room.

Small Spaces

Natural Light Everywhere

Small spaces like hallways, closets, and laundry rooms can be hard to illuminate, especially with natural light. But with VELUX's innovative skylights, roof windows, and Sun Tunnels®, you can bring in enough daylight and, in some places, fresh air to turn every corner of your home into something extraordinary.

Patios & Sunrooms

A Room Of Light

Patios are the best of both worlds: all the amenities of being inside with the atmosphere of the great outdoors. Adding more daylight and fresh air with skylights is the next best way to upgrading your patio. And when you install skylights on your patio, they don't just affect that space; borrowed light spills into the surrounding interior rooms, helping brighten your entire home.

A Whole Home Transformation with Daylight

After closing on her new house, the first thing Ashley Rose of Sugar&Cloth wanted to do was rip out the old curtains and bring in more natural light. But with no windows on the front side of the house, the interior hallway and the bedrooms upstairs were still way too dark – especially for a house that would double as a photography studio for the DIY, family, and lifestyle blogger.

Like many installing skylights for the first time, Rose was in the dark literally and figuratively. So, she found a certified VELUX installer, had a free consultation, and ended up in a home transformed with daylight. Six VELUX Solar Powered “Fresh Air” Skylights with solar-powered, room darkening blinds were installed in the home’s three bedrooms, and seven VELUX Sun Tunnel® Skylights were installed in the main hallway, master bath, and en-suite bathrooms off the kids’ rooms.

Before:
Rose’s new home had minimal light until she added six VELUX Solar Powered Fresh Air Skylight and seven Sun Tunnels®.

Jen and Ken Dickerson
Rochester, NY

This Kitchen Was Way Too Dark Before Skylights

Ever since Jen and Ken Dickerson moved into their 1880s farmhouse outside Rochester, NY, the couple has had a kitchen renovation on their to-do list. The kitchen has a rustic English farmhouse decor, which includes blonde wood floors, wood ceiling beams, and cast-iron door hardware. The previous owners expanded the kitchen to encompass a porch, causing varying ceiling heights in the room. While the kitchen was spacious enough, at the home's center and far from any windows, it was still too dark.

When Jen saw one of her favorite interior designers, Shavonda Gardner, promote the VELUX Daylight Renovation Sweepstakes, she entered and won two VELUX Solar-Powered "Fresh Air" skylights with room-darkening blinds. Adding two skylights completely transformed the space where the family of four spends most of their time.

This Small Bathroom Reached New Heights with a Skylight

Laura Tusken of Inspiration for Moms faced an interior design nightmare: a small, cramped hallway bathroom. It's a challenge many homeowners face. With a bathtub or shower, toilet, and vanity crammed into such a tiny space, it can be difficult to make these small bathrooms look nice. And bathrooms can also feel dark and stuffy because they lack a window to bring in natural light or fresh air from outside. Tusken knew when she remodeled this bathroom it would be open, airy, and visually inviting.

Without the ability to reconfigure walls, Tusken looked up! By adding a skylight and opening up the ceiling, the bathroom was flooded with natural light and fresh air. Tusken also added in room-darkening blinds and VELUX ACTIVE with NETATMO to control the climate and environment of the room. No more humid air trapped in the bathroom; all that's left is beautiful light and clean, fresh air.

Small Bathroom Makeover

Skylights create a dramatic transformation

“ In this bathroom, which didn't have any windows, the skylight was the only way we could bring daylight and fresh air into this space. ”

A Sunroom with A Lot of Light From Above

Diana Elizabeth's home was anything but a dream location for the photographer and creative voice behind DianaElizabethBlog. In fact, to capture her work and create content, she resorted to using other locations outside of her home with a better lit environment. Elizabeth finally had enough of the darkness when she added on another room to her home, causing her to lose four windows and a door with a window. Since she couldn't look out, she looked up for a solution: skylights!

Elizabeth installed skylights throughout her home: her kitchen, two bathrooms, a laundry room, and the new room known as "the expansion." "The expansion" features 10-foot high ceilings, transom windows above French doors, and two skylights. With an abundance of natural light filling the space from the new windows, Elizabeth wanted light to go deeper into the room with skylights. "It really makes a difference – instead of one direction of light from the side, you have more light making the entire room feel brighter and lighter."

Before:
 Elizabeth's new expansion was the room that started it all and the need for natural light throughout the space.

Skylights Promote Healthy Living in This New Kitchen

Mickey Trescott, author of The Autoimmune Paleo Cookbook, recently renovated her kitchen and added skylights to embrace Biophilic design. Biophilic design refers to incorporating connection to the outdoors in our indoor environments, whether that is through natural ventilation and materials, natural lighting, outdoor views, landscaping, or interior designs that mimic nature.

Skylights create a seamless way for natural exposure to blue-spectrum light to happen, which promotes wellbeing in the space. Trescott also chose VELUX "Fresh Air" Skylights to ventilate the space and promote a healthy indoor air environment.

Before:
Trescott's kitchen was incredibly dark, completely enclosed in walls and a suffocating, 7-foot ceiling.

Amanda Johnson
Northern California
Follow: @allthingsnew_home

A Dull Laundry Room Turns into an Inspiring Space

Amanda Johnson, the creative mind behind @allthingsnew_home had three things in mind when she renovated her small laundry room: create a minimal design, make it bright, make it functional. Her Northern California ranch home has a small space in between the garage and the main house with washer/dryer connections and a small sink. This windowless room was designed by the homebuilder to be used as a utility space. The room had a bland grey floor tile, a set of wall-mounted cabinets, a washer/dryer set, and a small vanity. The space had one electric light centered in the ceiling, but hardly any natural light.

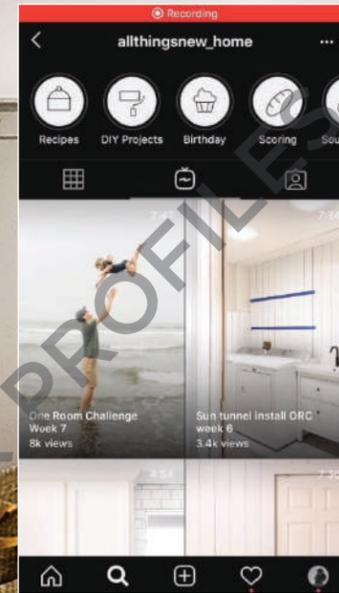

Paint wouldn't solve Johnson's lighting issue. She knew that only natural light would bring out the best in her finishings, so she added two VELUX Sun Tunnel® Skylights, equally spaced to provide bright, even natural light throughout the room. The natural light from the Sun Tunnels® highlights details in the hexagon floor tiles, a runner rug, and the greige paint color of the shiplap. Plus, sunlight just feels good!

Before:
Johnson's laundry room had bland grey floor tile, a set of wall-mounted cabinets, a washer/dryer set and a small vanity.

A Skylight for Every Ceiling

Flat, Attic, Cathedral, Vaulted

Have you considered installing a skylight, looked up at your flat ceiling, and thought that there's just no way? You're not alone! One of the most common misconceptions about skylights is that they can only be installed in homes with vaulted ceilings. But we're here to tell you that's not the case.

Flat Ceiling

If you have flat ceilings, once your skylight is set outside, your installer will construct a drywall light shaft inside. This shaft directs daylight to the room below while hiding the attic space between your ceiling and roof.

Attic

Even if your attic has obstacles like HVAC units, you can still add natural light to your home. Sun Tunnel® Skylights fit between ceiling supports, allowing light to fill the space below uninhibited.

Cathedral Ceiling

The advantage to cathedral ceilings during skylight installation is that without attic space between the roof and your home's interior, there's no need for a light shaft. So, once your skylight is installed, the work's all done.

Vaulted Ceiling

Although similar to a cathedral ceiling, vaulted ceilings feature a single sloping side or arched slope. This style may require a light shaft to be created between your ceiling and roof for the skylight.

3 Types of Installation

Deck-Mounted, Curb-Mounted, Self-Flashed

When it comes to skylights, there are three different types of installation methods. To know which installation is right for a home, a skylight installer or roofer will evaluate the home's roof pitch, roof material, ceiling type, and whether this is a replacement job or a new cut-in. But whatever the method, you're installing the same great skylight that brings in plenty of natural light and fresh air!

Deck-Mounted Skylights

Deck-mounted skylights allow your skylight to have a low profile on your roof and create an energy-efficient installation. With this installation, your skylight is nailed directly to the roof-deck. Deck-mounted skylights are ideal for new construction homes or for brand new cut-in skylights.

Curb-Mounted Skylights

Curb-mounted skylights are the most common installation preference in low-pitch or flat-roof situations. The "curb" is a frame built mostly of two-by-fours that are attached to the roof. The skylight is then installed on top of the curb. You can imagine it as a shoebox: the curb is the box and the skylight is the top.

Self-Flashed Skylights

Self-flashed skylights differ from both deck- and curb-mounted skylights because their curb and flashing are built into the skylight. No extra flashing kit is needed. The skylight sits directly over the rough opening in the roof deck and is then sealed.

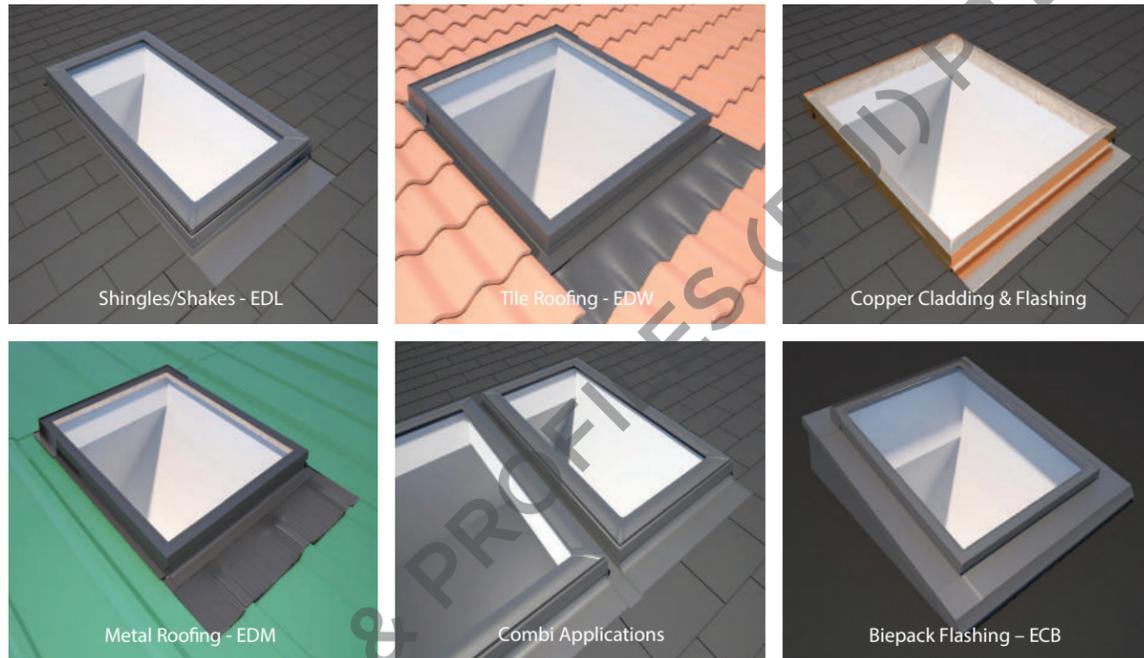

Flashing Systems

Deck-Mounted, Curb-Mounted

VELUX Skylight Flashing Kits are a crucial part of our complete system designed to shed water without relying on sealants that can break down over time. No matter the scope of your project, we offer a variety of skylight flashing systems to ensure a weather-tight fit for virtually all roof types and slopes so you can easily install the skylight of your dreams.

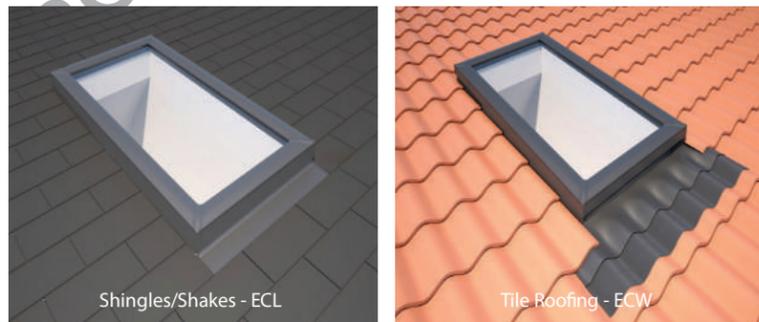

Deck-Mounted Flashing Systems

Each of our deck-mounted flashing systems includes a pre-attached deck seal, adhesive underlayment, and engineered flashing. They attach directly to your roof deck and interweave with the roofing material to ensure your skylight won't leak.

Curb-Mounted Flashing Systems

VELUX curb-mounted flashing systems come with a pre-attached skylight gasket, which provides a tight seal between the site-built curb and skylight. When combined with an included adhesive underlayment and engineered flashing, they create a seal to ensure no water leaks around your skylight.

No Leak Warranty

3 Layers of Protection

The No Leak Promise is our guarantee to you that the VELUX skylights installed in your home will not leak. We're able to make and keep this promise with a 10-year installation warranty thanks to our patented three layers of water protection on our deck- and curb-mounted skylights.

- 1 Pre-Attached Seal**
 Pre-attached deck seal (deck-mounted) or gasket (curb-mounted) provides a tight seal for leak-proof installation.
- 2 Adhesive Underlayment**
 Adhesive underlayment for secondary water protection against the harshest weather conditions.
- 3 Engineered Flashing**
 Engineered flashing for easy installation and primary water protection.²

Rest easily beneath your skylight knowing that, while it lets in abundant sunlight and fresh air, it will never let in rain.

Testing Data

VELUX rigorously tests the materials of our skylights so you can rest assured that the products installed in your home are safe.

For our most up-to-date data, visit veluxusa.com/testing-data.

ENERGY STAR®

One of the most straightforward ways to help meet energy codes as a builder or architect, while still designing bright, airy buildings, is to specify ENERGY STAR® certified products.

Most VELUX residential products are ENERGY STAR® certified in all 50 states, which means they meet energy efficiency standards set by the US Environmental Protection Agency (EPA). In order to be ENERGY STAR® certified, fenestration products must have their U-factor, Visible Transmittance, and Solar Heat Gain Coefficient ratings independently tested and approved under the FenStarSM Certification Program of the National Fenestration Rating Council (NFRC) to qualify.

By using ENERGY STAR® certified products, architects and builders can use skylights to bring much needed daylight and fresh air inside, allowing them to create more attractive buildings and more livable spaces while still meeting local energy codes.

In warmer climates, there is great potential for lighting energy savings by using emerging control technologies like VELUX ACTIVE or more effective daylighting products like VELUX skylights with blinds and Sun Tunnel® Skylights.

Visit energystar.gov for more information.

Code Compliance

VELUX offers a broad array of skylights, roof windows, and Sun Tunnels® that meet the applicable performance requirements and testing and labeling standards written into the most current US Model Codes:

- 2018 IBC (International Building Code)
- 2018 IRC (International Residential Code), and
- 2018 IECC (International Energy Conservation Code),
- As well as local and regional codes based on the above codes.

Additionally, electrical components built into VELUX products are UL listed.

Standard VELUX residential skylights and Sun Tunnel® products also meet or exceed applicable Powersmart requirements, in addition to those of the current and prior North American Fenestration Standards (NAFS), also known as AAMA/WDMA/CSA 101/I.S.2/A440. Copper-clad versions may not exceed these requirements but do meet other standards required of them.

To verify these attainments on-site, the products are shipped with all required labels to expedite the inspection and final acceptance process. VELUX confidently certifies through these labels that only products consistent with the tested specimens are sent to the job.

Warranty

For 80 years, VELUX has been dedicated to producing skylights that are synonymous with quality and reliability. Our commitment to you does not end once your skylight is installed.

The VELUX deck- and curb-mounted product family is designated as "The No Leak Skylight." It carries a 10-year installation warranty, plus 20 years on glass seal failure, 10 years on product, and 5 years on blinds and controls.

This limited "No Leak Skylight" warranty does not apply to VELUX product purchased prior to January 1, 2010.

NOTICE: ALL GLASS MAY BE SUBJECT TO UNEXPECTED AND SPONTANEOUS BREAKAGE in rare circumstances due to imperfections in the glass that are undetectable during the manufacturing and inspection process by the manufacturer of the glass and VELUX.

VELUX offers the choice of laminated or tempered glass skylights. Impact glass and comfortplus glass are all types of laminated glass. Comfort glass is a type of tempered glass. Laminated glass is a combination of two or more glass sheets with one or more interlayers of plastic (PVB) or resin. In case of breakage, the interlayer is designed to hold the fragments together. Tempered glass does not contain an interlayer to hold the fragments together. Instead, tempered glass is designed to break into small, pebble-like pieces. When tempered glass breaks, pieces of glass come loose and may strike an individual.

CONSULT LOCAL REGULATIONS AND/OR BUILDING MATERIAL CONSULTANTS TO DETERMINE WHICH TYPE OF GLASS IS RIGHT FOR YOU OR IF LAMINATED GLASS IS REQUIRED IN YOUR APPLICATION.

All VELUX skylights, roof windows, Sun Tunnel® Skylights, flashing kits and blinds must be purchased through a qualified VELUX dealer. Please see the "Where To Buy" section of veluxusa.com website for a list of VELUX dealers near you.

The VELUX Group creates better living environments with daylight and fresh air through the roof. The VELUX product program contains a wide range of roof windows and skylights, along with solutions for flat roofs. The Group also supplies many types of decoration and sun screening, roller shutters, installation products, and products for remote control for installation in roofs. The VELUX Group, which has manufacturing companies in 11 countries and sales companies in nearly 40 countries, represents one of the strongest brands in the global building materials sector and its products are sold in most parts of the world. The VELUX Group has about 10,000 employees and is owned by VKR Holding A/S, a limited company wholly owned by foundations and family. For more details, visit velux.com.
